

Resume-Library → Candidate Profiles Delivered

Proposed automated workflow for SEPTA requisitions • September 30, 2026

ONE-TIME SETUP & VALIDATION

1. Confirm access and permitted use

Resume-Library + Unified.to: obtain eligible API access.
Confirm database scope, costs/credits, client-sharing rights and search filters.

2. Test a real search and candidate record

Check identity, skills, dated work history, education and credentials.
Establish what “updated” means. If access or data is insufficient, resolve before scheduling.

3. Define your search, schedule and destination

Job requirements, location, experience and activity criteria;
days/times to run; local folder or connected cloud storage.

RECURRING WORKFLOW — AFTER THE CONNECTION PASSES TESTING

4. Run scheduled candidate searches

Use supported Resume-Library search through Unified.to.
Retrieve matching records within account limits; remove duplicates.

5. Compare records with the requisition

Organize qualification evidence; flag missing information.
Set aside incomplete matches or include them only with clear gap labels.

6. Format and save your delivery package

Agency-prepared candidate profiles + qualification summaries.
Include source and retrieval date; save to your specified destination.

7. You review and choose what to submit to SEPTA

Target: deliver within seven calendar days of the requisition.
No communication with job seekers in this workflow.

Status: Unified.to documents candidate List/Get methods and fields including first name, address, title, skills, experiences, education and updated date. Account access, search behavior, complete records and automated delivery are not yet tested.

Important: These are agency-prepared profiles, not necessarily original resumes. Recent activity does not confirm availability. SEPTA's acceptance of this format remains unconfirmed.
